

The future of healthcare: **Value-based care.**

HOW WE WORK

Robust **access** to patient health data.

Equiscript's market-leading technology bridges information gaps with robust, multi-source data integrations from every care setting to provide a full picture of your patient's healthcare journey.

With access to 99% of patient medical records, we leverage machine learning to digitize and automate resource-intensive processes. Our solution delivers detailed clinical notes with powerful insights to support value-based care performance.

EQ Connect Clinical provides the necessary infrastructure to enhance reimbursements, optimize care coordination, and drive better care.

8%

Approximately 8% of adults receive all recommended preventive care services.

20%

An estimated 20% of hospital readmissions are from non-adherence.

\$240B

Care coordination efforts could save \$240B annually on care costs in the U.S.

\$1.5K

Approx. 30% of patients are missing diagnosis codes.
~\$1.5K for every patient at risk.

KEY USE CASES

Care gap closure

Identify, document, and close gaps in care with real-time clinical insights, ensuring timely interventions and improved outcomes across patient populations.

Medication adherence

Track filled prescriptions against prescribed medications to enhance adherence, address high-risk patients, and improve pharmacy performance by ensuring scripts are picked up.

New patient visits

Improve care coordination and empower your providers with up-to-day activity before a patient visit, including all care administered by outside providers. Streamline visits and see more patients daily.

Risk adjustment

Optimize reimbursements rates by getting prompted for missing or under coded diagnoses that risk adjust.
